- **Server Owner:** Owned and managed servers using Shell scripting and Java that hosted over 10,000 registered users.

PROJECTS

EasyAccess — Desktop File Management (Team of 2) (github.com/alesgsanudoo/EasyAccess), Aug 2025

- Built a desktop application that provides a unified file management platform across three cloud storage services: Google Drive, OneDrive, and Dropbox—integrated with the local file system for seamless access.
- Developed the UI and provider integrations; implemented a Transfer Manager enabling chunked, concurrent uploads/downloads with automatic retries and cancel support.
- Technologies: TypeScript, Electron, Webpack, Google Drive API, Microsoft Graph (OneDrive), Dropbox API.

MySubs — Web Subscription Management (github.com/alesgsanudoo/mySubs), October 2024

- Built a web App tool that helps users effectively track their expenses. It allows users to add, view, and delete subscriptions with details like name, price, payment method, and billing cycle.
- Ensured data security with encrypted cookies and session management using tools such as JWT and MongoDB.
- Technologies: MongoDB, Next.js, TailwindCSS.

SnapBattle — Social Mobile Application (Team of 5) (github.com/alesgsanudoo/snapbattle), May 2024

- Built an innovative mobile application designed to keep friend groups connected through the fun and engaging activity of photo-sharing based on daily prompts.
- My role included managing user authentication, backend functionality, messaging features, ensuring the application was responsive with real-time updates, and serving as the Scrum Master to facilitate sprint planning and team collaboration.
- Technologies: MERN Stack (MongoDB, Express.js, React Native, Node.js), Socket.IO, Firebase and OpenAI
